Model 375P-1000v
Gateway Monitor

Introduction
The Model 375P-1000 is a Digital Model 375 Controller coupled to two lead-shielded 7866 cm³ (480 in³) plastic scintillator detectors. The detectors are encased in weathertight enclosures suitable for the outdoor environment, while the Model 375 Controller is normally mounted indoor to a wall near an operator. This cost-effective solution offers a simple system that is easy to operate and maintain.

This system includes vehicle presence sensors that detect an approaching vehicle so the controller can switch from background update mode to vehicle counting.

The controller supplies local alarms but it may also connect to external alarms or be put onto an Ethernet network if desired. In addition it has a 24-hour battery backup to keep the system operational in the event power is lost.
